  Conference Title: Proceedings of CHI 96. Human Factors in Computing
Systems
  Conference Sponsor: ACM
  Conference Date: 13-18 April 1996   Conference Location: Vancouver, BC,
Canada
  Language: English   Document Type: Conference Paper (PA)
  Treatment: Practical (P)
  Abstract: The Amulet user interface development environment uses
hierarchical command objects to support the creation of highly interactive
graphical user interfaces. When input arrives or a widget is operated by
the user, instead of invoking a call back procedure as in most other
toolkits, Amulet allocates a command object and calls its DO method. Unlike
previous uses of command objects, Amulet organizes the commands into a
hierarchy, so that low level operations like dragging or selection invoke
low level commands, which in turn might invoke widget level commands, which
invoke high level, application specific commands, and so on. The top level
commands correspond to semantic actions of the program. The result is
better modularization because different levels of the user interface are
independent, and better code reuse because the lower level commands, and
even many high level commands such as cut, copy, paste, **text edit**, and
change color, can be reused from the library. Furthermore, the commands in
Amulet support a new form of Undo, where the user can select any previous
operation and **selectively undo** it, repeat it on the same objects, or
repeat it on new objects. In addition, operations like scrolling and
selections can be undone or repeated, which can be very useful. Thus, the

Black Moshannon Systems' SPEED Ferret (TM) is a global find and replace
utility that can search all object properties for **text** strings. It allows
users to view and print all occurrences; change **text** strings; test
changes; and undo unwanted changes. Tapping the program, users can speed
development. SPEED Ferret can search all project property values and source
code at one time. The system provides developers with object location
information and renaming controls. It also displays caption properties in a

Editing images of text
Bagley, Steven C; Kopec, Gary E
Communications of the ACM   v37n12   PP: 63-72   Dec 1994
ISSN: 0001-0782   JRNL CODE: ACM
WORD COUNT: 6229

...TEXT: by a CR character.

Table 1 identifies a small subset of the Image EMACS linear **text   editing**
 commands. (Table 1 omitted) Most editing operations take place in the
vicinity of a distinguished...

... commands provide various forms of "cut and paste" editing. For example,
the command cut-region   **removes** the characters between the cursor and a
second buffer position called the   **mark** . Cut **text** is stored in a special
buffer from which it can be pasted back, either at...

Selecting data
Reichard, Kevin; Johnson, Eric F
UNIX Review v12n12 PP: 89-96 Nov 1994
ISSN: 0742-3136 JRNL CODE: UXR
WORD COUNT: 1753

...TEXT: This event indicates that your application lost ownership of a
selection, so your program should **unselect** any data **selected** when first
asking for the selection ownership. For example, if the user selected a
 paragraph of **text** , likely your application would highlight the **text** .
When a SelectionClear event arrives, the feedback should advise you to
restore the original colors...
